

How many bags of mulch should I buy?

2" Depth	3" Depth	4" Depth	How Many Bags? (2 cu ft)
12 sq ft	8 sq ft	6 sq ft	1 bag
24 sq ft	16 sq ft	12 sq ft	2 bags
36 sq ft	24 sq ft	18 sq ft	3 bags
48 sq ft	32 sq ft	24 sq ft	4 bags
60 sq ft	40 sq ft	30 sq ft	5 bags
72 sq ft	48 sq ft	36 sq ft	6 bags

Do I need mulch?

Mulch will reduce the amount of water that evaporates from your soil, greatly reducing your need to water your plants. Mulch acts as an insulating layer on top of soil, keeping it cooler in the summer. **Roots like that!** Mulch keeps weeds down, and the weeds that do grow are much easier to pull. **Gardeners like that!**

Hamptons Estate Antique Black Mulch with Enhanced Color

- Guaranteed not to fade to grey.
- Beautifies landscape beds, patios, walkways.
- Insulates plant roots from extreme temperatures.
- Reduces soil erosion and crusting while discouraging weeds.

Hamptons Estate 100% Organic Natural Mulch

- Natural dark brown color.
- Beautifies landscape beds, patios, walkways.
- Insulates plant roots from extreme temperatures.
- Reduces soil erosion and crusting while discouraging weeds.

Why Organic?

Over time, organic mulches will slowly decompose and release nutrients into the soil and improve its structure. Organic mulches also keep the soil cooler and retain moisture levels more than inorganic mulches. However because organic mulch decomposes, it may need to be replenished more frequently than inorganic mulch.

Mulching Tips

Do not place mulch directly against plant crowns or tree bases! Mulch placed directly in contact with stems or tree trunks may retain excess moisture around the base of the plant.

Mulch applied too thickly anywhere can cause problems. A wood mulch when piled more than three inches high will start to rot much faster than usual. Mulching too deeply can also cause the soil to remain continuously damp, but not nourished, contributing to root and stem rot problems in addition to depriving plants of needed oxygen. Apply a mulch layer no more than one to three inches thick.

Thoroughly water newly installed wood or bark mulches. If the mulch is allowed to dry out or remain dry, nuisance fungi can colonize the mulch and create a water-repellent surface.
